FM600TU-2A

HIGH POWER SWITCHING USE
INSULATED PACKAGE

FM600TU-2A

- $I_{D(rms)}$ 300A
- V_{DSS} 100V
- Insulated Type
- 6-elements in a pack
- Thermistor inside
- UL Recognized
  File No.E323585

APPLICATION

AC motor control of forklift (battery power source), UPS

NTC THERMISTOR PART

Symbol	Parameter	Conditions	Limits			Unit
			Min.	Typ.	Max.	
R_{25}*6	Resistance	T_{TH} = 25°C*5	—	100	—	kΩ
B*6	B Constant	Resistance at T_{TH} = 25°C, 50°C*5	—	4000	—	K

*1: It is characteristics of the anti-parallel, source to drain free-wheel diode (FWDi).
*2: Pulse width and repetition rate should be such that the device junction temperature (T_j) does not exceed T_j max rating.
*3: T_C' measured point is just under the chips. If use this value, $R_{th(s-a)}$ should be measured just under the chips.
*4: Pulse width and repetition rate should be such as to cause negligible temperature rise.
*5: T_{TH} is thermistor temperature.
*6: $B = (\ln R_1 - \ln R_2)/(1/T_1 - 1/T_2)$ R_1: Resistance at T_1(K), R_2: Resistance at T_2(K)
*7: T_C measured point is shown in page OUTLINE DRAWING.
*8: Typical value is measured by using thermally conductive grease of λ=0.9 W/(m·K).

Important Notice

The information contained in this datasheet shall in no event be regarded as a guarantee of conditions or characteristics. This product has to be used within its specified maximum ratings, and is subject to customer's compliance with any applicable legal requirement, norms and standards.

Except as otherwise explicitly approved by Mitsubishi Electric Corporation in a written document signed by authorized representatives of Mitsubishi Electric Corporation, our products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury.

In usage of power semiconductor, there is always the possibility that trouble may occur with them by the reliability lifetime such as Power Cycle, Thermal Cycle or others, or when used under special circumstances (e.g. condensation, high humidity, dusty, salty, highlands, environment with lots of organic matter / corrosive gas / explosive gas, or situations which terminals of semiconductor products receive strong mechanical stress). Therefore, please pay sufficient attention to such circumstances. Further, depending on the technical requirements, our semiconductor products may contain environmental regulation substances, etc. If there is necessity of detailed confirmation, please contact our nearest sales branch or distributor.

The contents or data contained in this datasheet are exclusively intended for technically trained staff. Customer's technical departments should take responsibility to evaluate the suitability of Mitsubishi Electric Corporation product for the intended application and the completeness of the product data with respect to such application. In the customer's research and development, please evaluate it not only with a single semiconductor product but also in the entire system, and judge whether it's applicable. As required, pay close attention to the safety design by installing appropriate fuse or circuit breaker between a power supply and semiconductor products to prevent secondary damage. Please also pay attention to the application note and the related technical information.

Keep safety first in your circuit designs!

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials
